Product Description

0.5-2m Width Diamond Expanded Metal Screen Expandable Wire Mesh

The mesh structure of the expanded metal mesh makes it excellently permeable and breathable. It allows air, light and sound to pass freely while maintaining a certain physical barrier to meet the needs of different application scenarios.

Expanded Metal Mesh is formed in an expanding press. The basic metal is simultaneously slit and cold-formed, which expands the slits into diamond shaped openings of uniform size and regularity. Expanded metal mesh is a form of metal stock made by shearing a metal plate in a press, so that the metal stretches, leaving diamond-shaped voids surrounded by interlinked bars of the metal. The most common method of manufacture is to simultaneously slit and stretch the material with one motion.
