Product Description

2x2 Galvanised Welded Wire Mesh Fence Roll With Fine Wire Diameter

Welded wire mesh is one popular materials in concrete, construction and industry. It is made of low carbon steel wire, PVC coated wire and stainless steel wire, after welding or before welding and surface zinc treating .The welded wire mesh are the most excellent anti-corrosion resistance among all the steel wire mesh products, it is also the most versatile wire mesh due to its wide application in different fields.

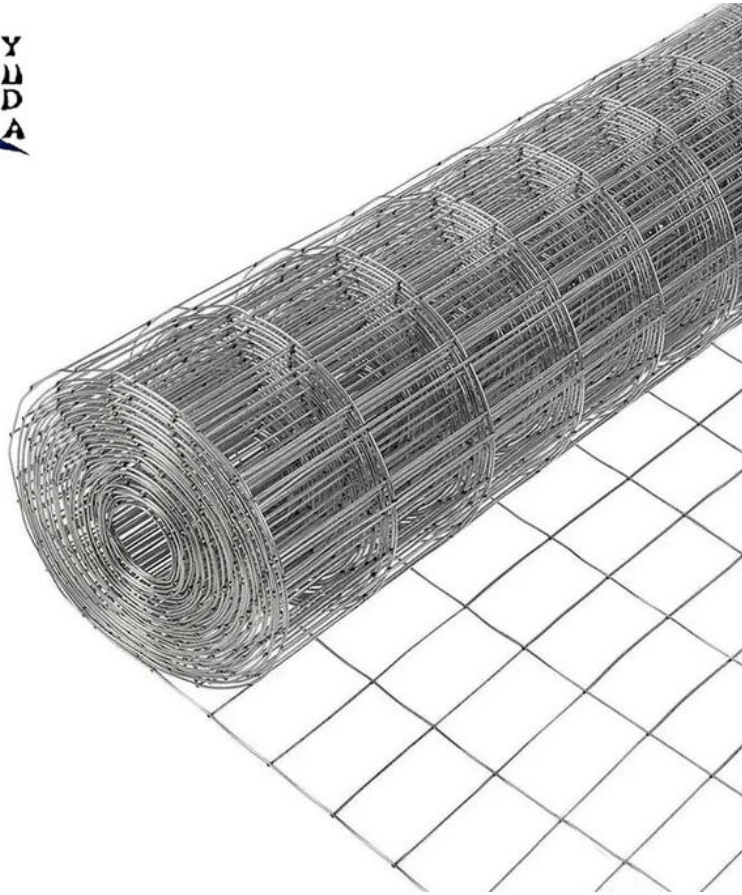

In general, finer wire diameters provide finer mesh for applications that require more detailed protection. Whether used in construction, agriculture or industry, welded wire mesh with a fine wire diameter provides finer filtration, greater safety and better visual clarity.

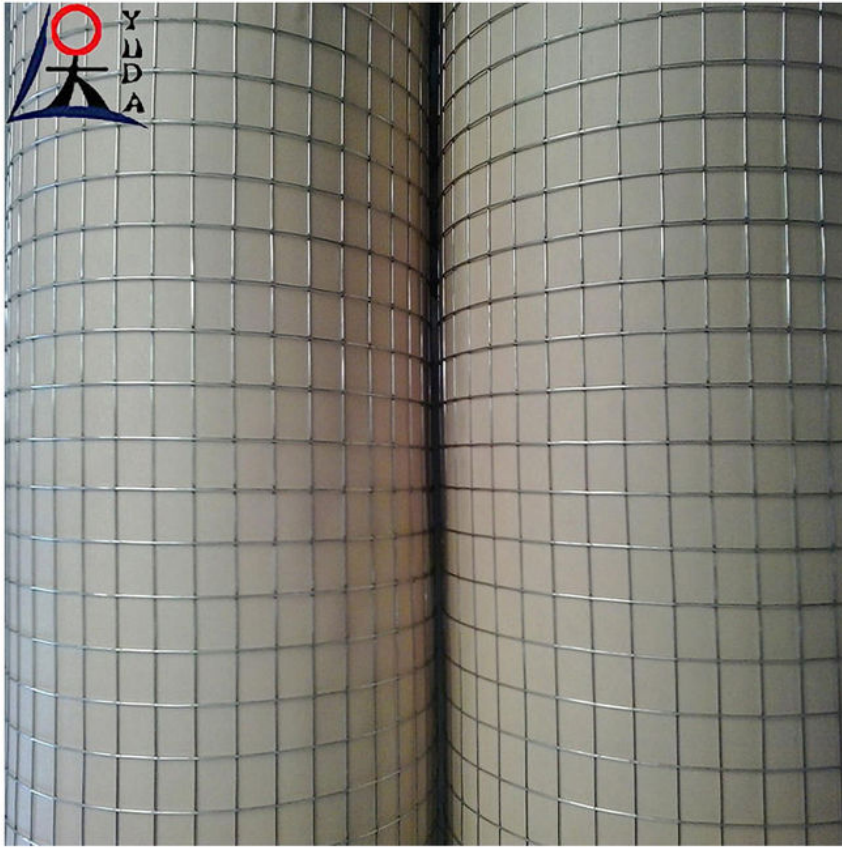

Welding nets are usually made of metal wires, which have high strength and stability, and can withstand high temperatures and high currents.

The welded mesh made of high-quality low-carbon steel wire has good anti-corrosion and rust resistance characteristics, and a long service life.

Welding mesh has good ductility, good weldability, low cost, good welding technology, and uniform and firm mesh surface.
