## Product Description

### Lightweight Shade Cloth Agricultural Planting Greenhouse Breeding Sunshade Net

Shade Net is made of polyethylene (HDPE) material by adding UV stabilizers and anti-oxidants. It is a highly UV-stabilized product. It is mainly used in Agricultural Protection Shading, Greenhouse Shade, Bird Control, Windbreaking Dust Control, Construction Safety and various shading fabrics. Sun shade net also used for temporary fencing, packing applications, greenhouse cover.

Although the sunshade net is relatively thin, it can effectively block direct sunlight and reduce sunlight exposure and heat conduction, thus providing a certain degree of shading and sun protection. It filters out some of the ultraviolet (UV) and infrared (IR) radiation, reducing damage to humans and objects. In addition, sunshade can also reduce the outdoor temperature and provide a cooler environment.

By adjusting light and temperature, shading nets can promote crop photosynthesis, improve photosynthetic efficiency, and increase dry matter accumulation. At the same time, it can also improve the growth environment of crops, reduce the occurrence of diseases and pests, and increase crop yield and quality.
