Steel mesh, also known as metal plate mesh, diamond mesh, iron plate mesh, etc., is a tensioned object with a mesh structure formed by processing with a steel plate mesh punching and shearing machine. It is widely used in various fields such as construction, transportation, energy, etc. due to its durability, anti slip, and good ventilation effect. The materials of steel mesh are diverse, including low-carbon steel plates, stainless steel plates, aluminum plates, etc. There are also various surface treatment methods such as hot-dip galvanizing and spray coating to meet the needs of different customers.
