## Product Description

### PVC Coated Woven Hexagonal Mesh Galvanized Gabion Box Gabion Retaining Wall

Gabion basket by high corrosion resistance, high strength, ductility of low carbon steel wire or coated PVC steel wire using mechanical weaving, the use of the net made of the box structure is gabion basket.

Material introduction:

(1) Galvanized steel wire: high quality low carbon steel wire, the diameter of the steel wire 2.0MM-4.0MM, the tensile strength of the steel wire is not less than 380Mpa, the surface of the steel wire is protected by hot dip galvanizing, the thickness of the galvanized protective layer is made according to customer requirements, and the maximum amount of galvanizing can reach 300g/m<sup>2</sup>.

(2) Zinc-5% aluminum (10% aluminum)-mixed rare earth alloy steel wire: (also called Golfan) steel wire, which is an international emerging a new material, corrosion resistance is more than 3 times that of traditional pure galvanized, the diameter of the steel wire can reach 1.0MM-3.0MM, the tensile strength of the steel wire is not less than 1380Mpa.

(3) Galvanized steel wire coated: high-quality low carbon steel wire, a layer of PVC protective layer on the surface of the steel wire, and then woven into various specifications of hexagonal nets. This layer of PVC protective layer will greatly increase the protection in the highly polluted environment, and through the choice of different colors, it can be integrated with the surrounding environment.
